

The mid-term report

Jincai Ma

Xi'an Shiyou University

October 15, 2020

Introduction

- The bike-sharing system is a way to rent bikes through a city-wide network of kiosk locations, automatically gaining membership, renting and returning bikes. People can rent a bike from one place and return it to another as needed.
- Historical car records combine date, weather, temperature, humidity and other factors to predict the bike-sharing program needs in Washington.

Data Description

■ Descriptive statistics of the data

	season	holiday	workingday	weather	temp	atemp	humidity	windspeed	casual	registered	count
count	10886.000000	10886.000000	10886.000000	10886.000000	10886.000000	10886.000000	10886.000000	10886.000000	10886.000000	10886.000000	10886.000000
mean	2.506614	0.028569	0.680875	1.418427	20.23086	23.655084	61.886460	12.799395	36.021955	155.552177	191.574130

max	4.000000	1.000000	1.000000	4.000000	41.00000	45.455000	100.000000	56.996900	367.000000	886.000000	977.000000

Data Visualization

- The standard deviation of the number of leases you have to predict at the end is very large. So let's look at the distribution by drawing it.

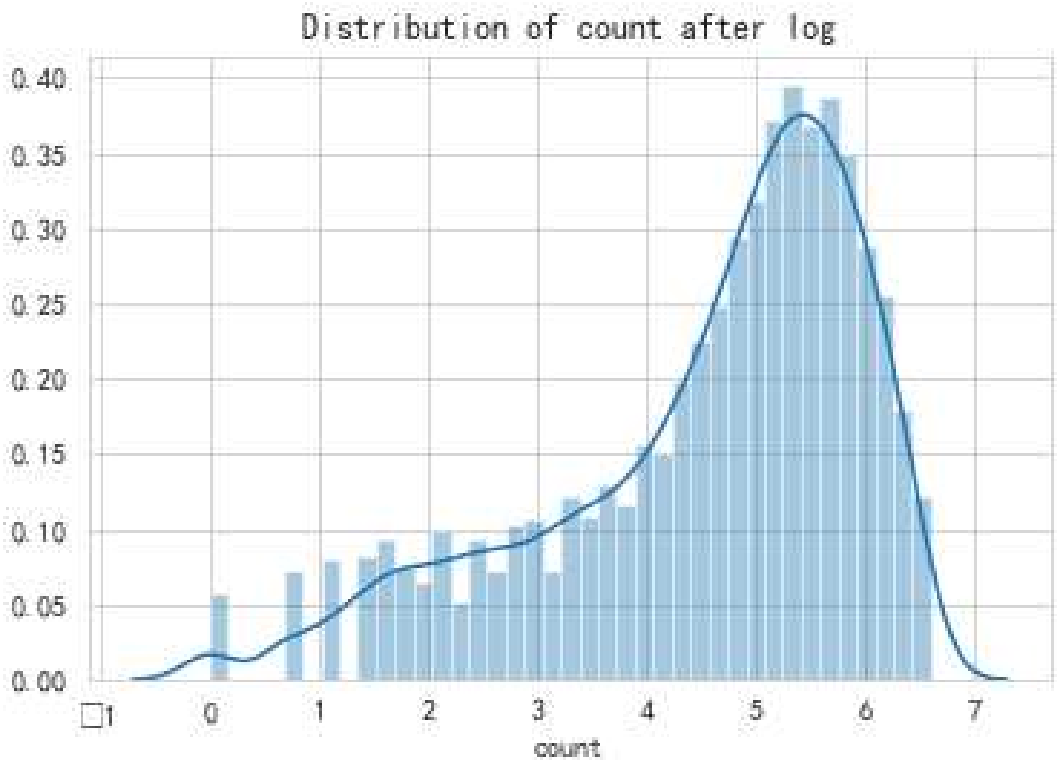

Data Visualization

- Exclude data other than three standards,log of count

max	4.000000	1.000000	1.000000	4.000000	41.000000	45.455000	100.000000	56.996900	355.000000	652.000000	663.000000

Data Visualization

■ The impact of hour,month,season,year,weekday,workingday

Data Visualization

■ The impact of weather

Data Visualization

■ The impact of temp, atemp, humidity, windspeed

Data Visualization

- Impact of season, week, registered and non-registered users on cycling usage trends
- For different times of the day, there is a clear trend in the use of Shared bikes, with two distinct peaks, in line with people's understanding of morning peak and evening peak. The trends were the same for all four seasons, except that usage in spring was slightly lower than in the other three.

Data Visualization

- The usage of registered users accounts for the majority of the total usage, and the trend is consistent with the total usage trend, rather than that of registered users. The usage at different times of the day does not change much, and the trend is similar to the usage trend at weekends.

Data Visualization

- From Monday to Friday, there are two peak usage periods, while on weekends, the usage trend is completely different from that on weekdays. The usage trend changes from bimodal to flat unimodal, and the peak usage period is concentrated at 11-17 o'clock.

Data Visualization

- Draw the thermal diagram of the correlation coefficient

Conclusion

- Through this Kaggle project, I practiced by myself to have a deeper understanding of data visualization and to explore the structure and rules of data by means of drawing and tabulating.
